This mill differs from all others to the commence from of the upper or fluming Stone, which is composed of French Burr Hicks, successed in a case from Case, which forms the back and hoop of the Stone with a Cast from Eye, or Hush, than is of greater external diameter at the bottom that at the top, which is secured to the back by four balls, so that every block is in the form of a dove tail, which gives greater strength to a Stone than any other method which is required in small mills, where the stone is run with great speed, and becomes dangerous if not strongly made. It also gives any weight to a stone of small diameter that is required without having it thick or lage, that makes if to heavy.

This mill is a square frame made of wood or cast from, in the form of a bush, with Endge-tree, Spindle Balance, Bing Driver, and Regulating Screw, and grinds u on the same principle as a large mill, differing only in the Burour Stone; this being of great weight analysis it to grind nearer the center a greater quantity of grain with its a power into any other mill now in use. This mill is portable, and may be attached to steam, water, horse or hand power.

AbSU all sizes of Epanen Burr Mill Stones, manufactured on the sump principle.

Joseph H. Burrows, of Cincinnati, is the inventor, for which be obtained betters Putent in 1842. For all afringements the purchaser will be held responsible for the right of oxing.

These Mills do not require a Millright to set them up; and all that is necessary to put them in operation, is to altach a hand to the pulley on the spincle, with a grain sufficiently large to run a twenty-four inch mill the revolutions per minute, attached to Can, Steam, or Witer Power. By the steady application of two array power the Mill will grind a x to a bushels per hour of good ment and will grind wheat as well as corn. The thirty inch mill, if put to its fulles, speed, will grind from ten to friend bushels per hour.

These mills are warranted to be in overy respect as recommended.
